

WOODSIDE PLUTO RISER PLATFORM

Project Description

Eco Connection was awarded the contract to supply commissioning technical services to Woodside for the offshore riser platform as part of the Pluto Gas Project. Woodside were impressed with our understanding of the technical requirements, our capability to supply the right calibre of personnel and our OH&S and IR track record and strategies.

The award of this project was a significant milestone for Eco Connection and recognises our capability to complete large scale completions and commissioning packages of this nature.

Project Achievements

Our client has been extremely satisfied with the level of responsiveness shown by the project management team in organising and executing preliminary works prior to mobilisation. Management of procurement for the project was completed to an accelerated schedule, and organisation of the containers for storage was done to a standard that Woodside had never expected with all items being catalogued and their storage location written on a spreadsheet to make finding any one of the 800 odd line items an easy process.

Scope of Work

Eco Connection was engaged to provide I/E Commissioning Techs, Instrument Commissioning Techs, Hazardous Area inspectors and Mechanical Commissioning Technicians, for putting together the work packs, commissioning the temporary living quarters, complete all hazardous area inspections on the platform and facilitate all commissioning of the platform whilst assisting the Hook Up Crew. Systems commissioned included, HVAC, Fire and Gas Detection, Instrument and Electrical Control Systems, Telecommunications Systems and all Mechanical systems.

PROJECT SPECS

Status	In progress
Dates	Aug 09 - ongoing
Location	North West Shelf, WA
Contract Type	Cost Reimbursable
Discipline	All (Mech, Elec, Inst, Comms, HVAC etc)
Budget	\$3 million +
Safety Incidents	0
Environmental Incidents	0
